ZEUS-H SERIES

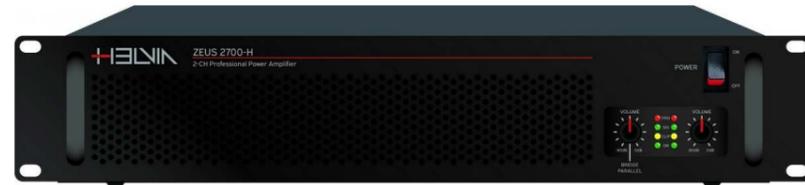

Professional Class-H Power Amplifier

ZEUS amplifiers always mean reliability and ruggedness. They were born for fixed installations or live applications of low-impedance professional sound systems, and offer RMS powers ranging from 100W to 1000W @ 8ohm per channel.

The series consists of 2-channel models, three of them in class AB; two in class H. Thus, these are equipment whose technologies are extensively tested and guarantee the highest audio quality.

The difference from similar systems depends on the great attention paid to the quality of the components (toroidal transformers, electrolytic capacitors, transistors and others) and to the efficiency of protections and limiter, all while always considering robustness, durability and safety of both internal circuitry and driven speakers.

ZEUS-CA SERIES Multipurpose Power Amplifiers

Multichannel solutions for maximum versatility

Commercial audio applications today require not only reliability and robustness, but also excellent audio quality and extreme versatility in adapting systems to multiple needs even within the same installation.

The ZEUS CA series offers multichannel solutions from 1 to 4 zones and power ratings from 120W to 350W RMS for each channel. Each zone is completely independent, and you can choose between an output of 70V/100V or a low impedance output between 4 and 16 ohms.

Reliability and Sound Quality

Safety, reliability and durability are the premises from which Helvia started in their design. The digital processing is used to protect the amplifier and speakers from signal peaks, excessive overheating and overloading, but it is the same 2-unit 19" rack format designed to promote thermal dissipation and increase the efficiency of the processor-controlled speed fan cooling system.

ZEUS X SERIES

4-CH Low-Impedance Power Amplifiers with Crossover

Multi-channel Solution even with high Sound Pressures

There are more and more fixed installations where maximum audio quality and high sound pressure are required. Just think of the increasing number of disco-pubs, restaurants, pubs, accommodation facilities such as hotels and holiday resorts where there is not only background music or PA.

ZEUS X by HELVIA is the answer to the request for 4-channel power amplifiers from 200W to 800W per channel, reliable and built with selected active and passive components.

Versatility and Compactness

ZEUS X integrates for each of the 4 channels a real analog processor with analog Limiter and Crossover. The VCAs and filters are of the highest quality. The cutting frequencies of the crossover are adjustable between 25Hz and 150Hz. This is particularly appreciated by installers in all those situations "on-the-fly" where remote control or other sophistications are not required, because it allows you to create stereo systems combined with subwoofers without using external Speaker Management Systems. The 4 channels can be connected in Parallel or in configuration.

Reliability and Sound Quality

Every professional knows that the H-class is now a well-established and reliable architecture; as well as being particularly suitable for medium-high power applications. What we tend to forget is that this type of amplifier has a good level of energy efficiency, a very low level of distortion and can regulate the working voltage of the terminals and the absorption in proportion to the output power. This can be done without a digital processing but with a keen eye to the budget, if compared to other Classes.

LIDO SERIES

Waterproof 2-way Passive Wall-Mount Speaker Pair

LIDO series is specifically designed for both indoor and outdoor applications in projects with constant voltage or low impedance systems. Thanks to the IP65 protection rating, to the PP woofers, to the UV-resistant PP cabinets, to the stainless-steel metal parts, and to the aluminum grille, these speakers do not fear the rigors of exposure to atmospheric agents. The high excursion custom transducers guarantee a clear and defined sound, always providing a higher audio quality even at high sound pressures. The power-tap selector allows you to select 3 powers and adapt the speaker to 100V or low impedance systems. The C-bracket allows you to adjust the horizontal (+55°/-55°) and vertical position (+20°/-20°).

Details designed for a long-life cycle

All materials are designed to increase speaker life cycle, even when installed in outdoor environments without protections. The cabinet and rubber covers are made of UV-resistant plastic material. The front grille is in aluminum with treatment against atmospheric agents, and the fixing screws are in stainless steel.

Weather-Resistant Transducers

Woofer and Dome Tweeter are made of water-resistant materials to allow use in outdoor places exposed to rain and moisture. Material type and thicknesses of the external parts have been designed to maintain a good frequency linearity and dynamic response.

LIVEO SERIES

Waterproof 2-way Passive Wall-Mount Speaker Pair

Liveo series combines simplicity and elegance with sturdiness and ease of installation. Whether outdoor or indoor, low-impedance or constant-voltage line, Liveo guarantees the right solution for every application. The housing, with minimalist and elegant lines, is made of Polypropylene with UV-resistant treatment; this ensures robustness and greater durability to exposure to sun, moisture and rain. Plastic woofer, Mylar tweeter and plastic cover of rear connections make these speakers completely waterproof. Both transducers are selected to offer not only waterproofness and high durability, but also an excellent level of audio quality. The built-in line transformer allows the speaker to be adapted to both constant-voltage - with 3 selectable power levels - and low-impedance systems. Each Liveo series speaker, in order to simplify installation as much as possible, comes with both a "C" bracket and a "ball-shaped" bracket, both with adjustable horizontal and vertical positions.

Weather-Resistant Transducers

Woofer and Dome Tweeter are made of water-resistant materials to allow use in outdoor places exposed to rain and moisture. Material type and thicknesses of the external parts have been designed to maintain a good frequency linearity and dynamic response.

Designed for easy installation in any condition

Each Liveo series speaker comes with two brackets for wall mounting. You can choose to use either the pan/tilt adjustable "C" bracket designed to mount the speaker mainly in a horizontal position; or the ball-shaped bracket that allows larger horizontal/vertical adjustment angles than the C bracket and is designed for mounting the speaker horizontally.

In addition to the screws and washers for attaching the brackets to the speaker, two hex wrenches and a steel safety cable are included for each case.

FLOOR SERIES

Floor and Wall Mount Active Subwoofer

Increasingly, high sound quality is required even in previously not-so-performing sound systems. Bars, restaurants, pubs, stores today use sound-music, video games, home cinema, etc. - not only as a simple background, but as a real marketing tool, where sound quality is an important ingredient. These subwoofers are meant to be placed in confined spaces, under sofas or against walls. But despite their slim look, housing volume and high-excursion woofers, deliver truly worthy bass of much larger systems. The built-in Class-AB amplifier is stable, designed for long-term use and equipped with an auto-power function (to reduce power consumption), limiter, thermal and overload protection.. In addition to the stereo line input, there is also a stereo high-power (low-impedance) input that allows direct connection to amplifier outputs or speakers of an existing system, which is very practical if distances or other factors do not allow traditional connections to the mixer or link outputs of an amplifier. The subwoofers come with 4 rubber feet to help distance the speaker when placed with the woofer toward the floor and 2 brackets for suspended wall mounting to minimize the space and make the woofer fully protected as it faces the wall.

Little space but lots of basses

HELVIA Floor subwoofers feature custom high-excursion woofers. The bass-reflex architecture cabinets are tuned to provide a linear and dynamic response even around 35Hz with power up to 200W. The slim design facilitates placement even in spaces that are not normally used, and allow you to enjoy your music and home cinema experiences like never before.

Designed to surprise

Floor Series woofers are designed to maintain maximum linearity in low-frequency excursion. The adjustable crossover from 40Hz to 150Hz allows the subwoofer to be set to blend seamlessly with the rest of the sound system.

GNS-550XGN

IP56 Coaxial Speaker with 5.25" Woofer and 0.75" Tweeter

SKU HLV0032

Top-notch sound in all weather conditions

Facilities for relaxation and socializing within the accommodation (gardens, verandas, terraces, parks, etc.) are very common and are almost always a real asset for restaurants, hotels, theme parks, villas and tourist attractions in general. Very often, however, little attention is paid to sound quality and you almost always end up with poor quality speakers that are not designed to withstand prolonged exposure to rain, mud and sun. The result is almost always poor and destined for constant refurbishment, because after a summer or winter season you can see how loudspeakers worn out.

HELVIA's GNS-550XGN garden speakers are a compact, durable and high-quality audio alternative, thanks to selected coaxial speakers and materials designed to withstand prolonged exposure to all weather conditions and anti-UV treatment.

Superb Audio Quality

The coaxial transducer is the heart of the GNS-550XGN. The 5.25" woofer has a polypropylene cone and rubber surround; the tweeter has a 0.75" coil and titanium dome. These characteristics give a frequency response of 60Hz to 20kHz with good uniformity and sensitivity.

The position of the transducer at the top of the cabinet with the magnet pointing upwards and the cone downwards, and the presence of a waveguide to balance the horizontal coverage, results in excellent uniformity and 360° horizontal coverage. Large areas can be covered with just one loudspeaker, depending on the sound pressure level required.

STONE-640XGR

IP56 Rock Coaxial Speaker with 6.5" Woofer and 0.5" Tweeter

Increasingly, sound systems for outdoor installations are demanding higher levels of sound quality and higher sound pressure levels. Whether in gardens, parks, patios or other outdoor locations, these speakers are designed to deliver high quality sound and blend in with the surroundings. HELVIA's STONE-640X loudspeaker is designed for gardens, terraces, outdoor restaurants, parks and generally any outdoor or indoor location where the loudspeaker base can be buried and a look that blends in with the landscape is required.

SKU HLV0033

Performance & Design

The STONE-640X is a coaxial loudspeaker designed to deliver superior sound in the harshest of environments. The shape and finish is reminiscent of an ordinary rock found in any outdoor landscape, but the fiberglass construction and 6.5" coaxial transducer with 0.5" Mylar tweeter make it a speaker capable of delivering high quality listening pleasure.

Easy to install

Installing STONE-640X is a cakewalk. Just connect the cable, choosing the terminals according to the type of cable and amplifier power, and bury the speaker for stability (see the manual for details). No brackets or concrete screeds is required.

MURA SERIES

Volume attenuator for 70-100V speakers + Off, with auxiliary line and 24V alarm control

The MURA 3 Series in-wall mount Volume Controllers are designed to be installed within normal 503-standard wall boxes (108x53,5x-74mm, not supplied). They allow control of the volume with, respectively, 4 positions + off for MURA 305, and 11 positions + off for MURA 310/330/360. The max. nominal powers range from 2.5W to 30W in case of 70V lines; and 5W to 60W for 100V lines. Each position attenuates the overall level from 5dB to 10dB, depending on the model. However, all they provide, in addition to the normal 70-100V audio line, the 70-100V auxiliary line at maximum level (the attenuation does not operate in this case but passes the whole signal to the speaker) and the 24V relay input for switching between normal and auxiliary line in case of alarm. The MURA 3 Series is supplied with a front cover plate (white) and is compatible with BTicino® Matix® 3P plates.

Features

- 70V and 100V Constant Voltage Audio Line Operation
- Auxiliary 70-100V Line with 24V relay control
- Front Cover Included (White)
